SUMMARY

MCA graduate (2025) seeking an entry-level Java Backend Developer role. Built and deployed two Spring Boot REST API backends (Spring MVC, Spring Data JPA, MySQL) with JWT security, payment integration, and unit and integration tests running in CI, with live Swagger demos.

TECHNICAL SKILLS

Languages & DB	Java, SQL, MySQL, PostgreSQL, Redis
Backend	Spring Boot, Spring MVC, Spring Security, Spring Data JPA, Hibernate, REST APIs, JWT, RBAC, RabbitMQ, Maven
Testing & DevOps	JUnit 5, Mockito, MockMvc, Testcontainers, Docker, Docker Compose, Kubernetes (basics), Git, GitHub Actions (CI/CD), Render
Tools & CS	Postman, Swagger/OpenAPI, Razorpay, Flyway | OOP, Multithreading, Distributed Systems

INDEPENDENT PROJECTS

E-Commerce Order Management System — 2026

Java 21, Spring Boot, Spring Security, JWT, Razorpay, Redis, MySQL, Docker, GitHub Actions, Render
GitHub: github.com/suresh-1219/ecommerce-order-management-system
Live demo: ecommerce-order-management-system-v6mm.onrender.com/swagger-ui/index.html

- Built an online-store backend: browse products, cart, orders and payments; admins manage products and categories.
- Secured with JWT and CUSTOMER / ADMIN roles so users can only access their own carts, orders and payments.
- Integrated Razorpay with HMAC-SHA256 signature verification to reject fake payments; idempotent requests prevent duplicate payments.
- Added Redis caching for product listings, login rate limiting (Bucket4j), and background order emails.
- Fixed issues found while testing the live API: password hash leaking in a payment response, a missing cart owner check, and an email timeout.
- Wrote 34 automated tests (JUnit, Mockito, MockMvc) run on every push via GitHub Actions; Dockerized and deployed on Render.

Student Management System — 2026

Java 21, Spring Boot, Spring Security, JWT, MySQL, Flyway, Redis, RabbitMQ, Docker, Testcontainers, GitHub Actions
GitHub: github.com/suresh-1219/student-management-system
Live demo: student-management-system-sh46.onrender.com/swagger-ui.html

- Built a backend for students, courses, enrollments, grades and attendance with JWT login and USER / ADMIN roles.
- Implemented refresh-token rotation with hashed tokens so a stolen token cannot be reused.
- Prevented course overbooking under concurrent enrollments using optimistic (@Version) and pessimistic locking.
- Sent grade and attendance notifications via RabbitMQ with a dead-letter queue; used Flyway migrations and Redis caching.
- Wrote 300 unit, controller and integration tests (JUnit 5, Mockito, Testcontainers on real MySQL) with 86% instruction coverage (JaCoCo); CI on every push.

Quiver: Consistent Object Sharing System — 2025

Java 17, TCP Sockets, Ed25519, Docker, Kubernetes, JUnit 5 | Certified academic project, 7i Tech Solutions

- Built a three-node Java system that syncs shared objects over raw TCP using vector clocks and Last-Write-Wins merging, with Ed25519-signed messages and a crash-safe journal; 88 JUnit tests incl. chaos tests (69% coverage).

EDUCATION & CERTIFICATIONS

MCA — 2023-2025 | CGPA 7.32/10
S.V.K.P & Dr. K.S. Raju Arts & Science College (A), Penugonda (Affiliated to Adikavi Nannaya University)

B.Sc. Computer Science — 2020-2023 | CGPA 7.18/10
S.V.K.P & Dr. K.S. Raju Arts & Science College (A), Penugonda (Affiliated to Adikavi Nannaya University)

Training: Java Full Stack Developer, TNS India Foundation (Oct 2024 - Mar 2025)
Certifications: Full Stack Java Development, Capgemini & TNS India Foundation (T030305224); AI Fundamentals, IBM SkillsBuild
