PROFESSIONAL SUMMARY

MCA graduate (2025) and entry-level Java Developer with hands-on experience building and deploying JWT-secured REST APIs using Java and Spring Boot. Familiar with role-based access control, payment integration, Redis caching, automated testing, Docker, and CI workflows. Academic background includes distributed systems, CRDTs, and concurrency.

TECHNICAL SKILLS

Languages & Databases: Java, SQL, MySQL, PostgreSQL, Redis
Frameworks & APIs: Spring Boot, Spring Security, Spring Data JPA, Hibernate, REST APIs, JWT, RBAC, Maven
API Tools & Payments: Razorpay, Swagger/OpenAPI, Postman
Testing & DevOps: JUnit 5, Mockito, MockMvc, JaCoCo, Docker, Git, GitHub Actions, Render
Computer Science: OOP, Multithreading, Distributed Systems, CRDTs, Vector Clocks, TCP Sockets

PROJECTS

E-Commerce Order Management System — 2026

Java 21, Spring Boot, Spring Security, JWT, Razorpay, Redis, MySQL, Docker, GitHub Actions, Render
Project: GitHub repository

- Built a backend for an online store: customers can browse products, add to cart, place orders and pay; admins manage products and categories.
- Secured it with login tokens (JWT) and two roles, CUSTOMER and ADMIN, so users can only see and change their own carts, orders and payments.
- Added Razorpay payments; the server checks each payment signature (HMAC-SHA256) so fake payments are rejected, and repeated requests do not create duplicate payments.
- Made product listings load faster with Redis caching, limited repeated login attempts, and sent order emails in the background so they never slow down an order.
- Packaged with Docker (app, MySQL, Redis) and deployed on Render; wrote automated tests (JUnit, Mockito, MockMvc) that run on every push with GitHub Actions.

Student Management System — 2026

Java 21, Spring Boot 3.5.4, Spring Security, JWT, MySQL, Flyway, Redis, Docker, Testcontainers, GitHub Actions
Project: GitHub repository

- Built a backend to manage students, courses and enrollments, with secure login (JWT) and USER and ADMIN roles.
- Stored refresh tokens as hashes and issued a new one on every use (token rotation), so a stolen token cannot be reused safely.
- Prevented a course from being overbooked when many students enroll at the same time, using optimistic locking (@Version) and pessimistic row locking.
- Used Flyway for versioned database changes, Redis caching, and login rate limiting; added Prometheus metrics, Docker Compose and GitHub Actions CI.
- Tested with JUnit, Mockito and Testcontainers, which runs the tests against a real MySQL database.

Quiver: Consistent Object Sharing System — 2025

Java, Distributed Systems, CRDTs, Vector Clocks, TCP Sockets, Multithreading, Maven, JUnit 5
Certified Academic Project — 7i Tech Solutions (Feb–Aug 2025)

- Built a three-node system in Java where computers share objects over TCP and stay in sync even when they update the same data at the same time.
- Used vector clocks to track which update happened first and Last-Write-Wins CRDTs to merge conflicts automatically; fixed a thread-safety bug using ConcurrentHashMap; wrote 16 JUnit tests.

Placement Management System — 2024

Spring Boot, PostgreSQL, Spring Data JPA/Hibernate, Bean Validation

- Built a REST API to add, view, update and delete student placement records, with input validation and clear 400/404 error messages.

EDUCATION & CERTIFICATIONS

Master of Computer Applications (MCA) — Adikavi Nannaya University | 2023–2025 | CGPA: 7.32/10

B.Sc. Computer Science — Adikavi Nannaya University | 2020–2023 | CGPA: 7.18/10

Training: Java Full Stack Developer — TNS India Foundation | Oct 2024–Mar 2025

Certifications: Full Stack Java Development — Capgemini & TNS India Foundation (T030305224); AI Fundamentals — IBM SkillsBuild
